DELIVERY PROGRAM
UNIQ SB-A1S

the basis for every balustrade

6 REASONS TO CHOOSE UNIQ

SMART CLAMPING

The patented clamping strip holds the glass securely in place. The lack of wedges means no stress in the glass, with the tension distributed evenly across the entire pane.

ADJUSTABLE

The profiles are secured via adjustable nuts, meaning that the profiles are always level and the glass is always straight, no matter how uneven the surface.

QUICK ASSEMBLY

Assembling a balustrade has never been so quick and easy: secure the profile, put the glass in place, apply the clamping strip and tighten the bolts. That's it!

SAFE

The clamping strip guarantees the glass will never come loose. It's the ultimate in safety.

LIGHT AND STRONG

The sophisticated hollow design makes the profiles lighter and stronger. It's the best choice both, structurally and financially.

ELEGANT FINISHING

The lack of rubbers ensures a stylish look. Various covers are available for finishing the floor and front side: simply click them into place.

ABOUT UNIQ

UNIQ STANDS FOR BEAUTIFUL AND SAFE

Transparency and light are important principles in the design of homes and buildings. Glass balustrades fit in perfectly with this. They offer an unobstructed view of the surroundings and the luxurious appearance makes every balcony, loft, terrace or staircase a true jewel. Safety comes first. That is why the UNIQ profiles have been internationally tested and certified.

NO MORE RUBBERS

To ensure the floor blends seamlessly into the glass, UNIQ uses no ugly rubbers. This creates a smooth, stylish finish that elegantly accentuates any architectural style.

FINISHING

A variety of aluminium covers can be easily clicked onto the base profile. Covers are available for both the floor side and the front side to ensure the perfect finish for your balustrade.

FOR EVERY STYLE AND TASTE

The UNIQ profiles and covers for finishing are supplied in a beautiful stainless steel look as standard. Or opt for the satin black anodized profiles, which fit perfectly with the industrial living trend and are also available from stock. The profiles are also available in brute, so that they can be finished in any desired colour.

ALWAYS THE RIGHT PROFILE

The 0.36 kN profiles are the lightest and smallest in the range and are intended for the private sector. They are available for mounting on or against the floor.

The different profiles of the 1kN series are suitable for all kinds of balustrades. By using the plating covers they are completely invisible and are mainly used in new constructions. The smaller S versions are more often used for renovation projects. These profiles are mounted on or against an already finished floor.

The 1.5 kN profiles are an excellent option for high-rise projects, especially for balconies in places where wind loads are decisive. With these profiles, thinner glass can be used in many cases, which saves costs.

The 3 kN profiles are the strongest profiles in the range. With a line load of up to 3 kN/m, they are real powerhouses and suitable for applications in places where large groups of people come together, such as sports buildings, cinemas and theatres.

The OXS profile has been specially developed for creating windbreaks. The same system, the same sleek appearance, but smaller in size and therefore an almost inconspicuous yet strong basis for a windbreak up to a maximum height of 90 cm.

OUR WIDE RANGE OF STAINLESS STEEL RAILING PARTS OFFERS ALL COMPONENTS TO CREATE SAFE AND STYLISH BALUSTRADES. ALSO AVAILABLE IN SATIN BLACK.

FOR EVERY PROJECT

the right profile

Nowadays, glass balustrades can be found in numerous construction projects. The extensive range of UNIQ profiles is versatile. From private balconies, holiday villas and apartment complexes to commercial buildings, shop premises, interiors and along terraces, UNIQ has the right profile for every large or small project. Here is a small selection of the many projects where UNIQ profiles have been used.

THE EXTENSIVE PACKAGE OF UNIQ
PROFILES IS PARTICULARLY VERSATILE

UNIQUE CLAMPING STRIP

The patented, continuous clamping strip makes the UNIQ system truly unique. With this clamping strip, the way the glass is held in place is substantially different from other systems, which brings significant benefits.

UNIQUE IN MOUNTING AND POSITIONING POSSIBILITIES

In addition to structural anchors, the O and A profiles can be mounted with a second row of anchors. These anchors are especially for leveling the profiles. The glass is completely and evenly clamped with the patented clamping strip, which avoids high tension in the glass.

DOUBLE SAFETY

The continuous clamping strip is secured in two ways. Cogging on both the clamping strip and the profile works as the first locking. The tightening of the specially designed bolts ensures the second locking.

Kensington Balustrade Systems

The Kensington brand name is synonymous with product excellence and quality. Our record of customer satisfaction extends over a 25-year period with repeat specification from architects, interior designers, house builders and metalworkers forming the major part of our business. With an extensive list of over 5,000 products to offer, here at Kensington Traders we can proudly claim to be a leading wholesaler of architectural metalwork components and fittings and proud UK stockists of the 'UNIQ Framless Glass Balustrade' structural glazing system.

Our technical department is available to offer advice on such matters as Building regulations, appropriate styles and sizes. For those seeking to install staircases, working drawings form an integral part of the quotation package.
